

Security Product Bulletin

NEW Secure Pellet Tee Cap

The installer asked and we responded. We received feedback that our Secure Pellet Tee Caps were too tight and required too much clearance to the floor.

Secure Pellet Tees produced after 08/01/2014 will now incorporate a redesigned one piece Secure Pellet Tee Cap. The redesigned one piece unit allows for easier removal of the cap for a hassle-free cleaning of the vent system. The clearance to the floor has been increased to accommodate all brands of pellet stoves.

Applications

Secure Pellet one piece tee cap is used at the bottom of a tee in a pellet installation to allow collection of ash and access for vent cleaning.

Features

Redesign eases the removal of the cap from the tee.

A shorter clearance to the floor is now provided for removal of the cap. A shorter clearance is ideal for those appliances that have outlets close to the ground. A minimum distance of 6.5" is required from the center of the stove outlet to the floor to allow removal of the cap.

This applies to all styles of SP tees with cleanout caps. All current part numbers will remain the same for this change.
